

INDIVIDUAL PROJECT: SOCIAL MEDIA CAMPAIGN WITH SEELF-PRODUCED INTERACTIVE INSTAGRAM FILTERS FOR LEARNING.

INDIVIDUAL PROJECT: SOCIAL MEDIA CAMPAIGN WITH SELF-PRODUCED
INTERACTIVE INSTAGRAM FILTERS FOR LEARNING.

BACKGROUND

I decided to make a virtual campaign gallery on Instagram as my reflective individual work. This virtual gallery affords infographics that cover 4 oral health and dental awareness topic. (tooth anatomy, teeth brushing, dental midline, and smile)

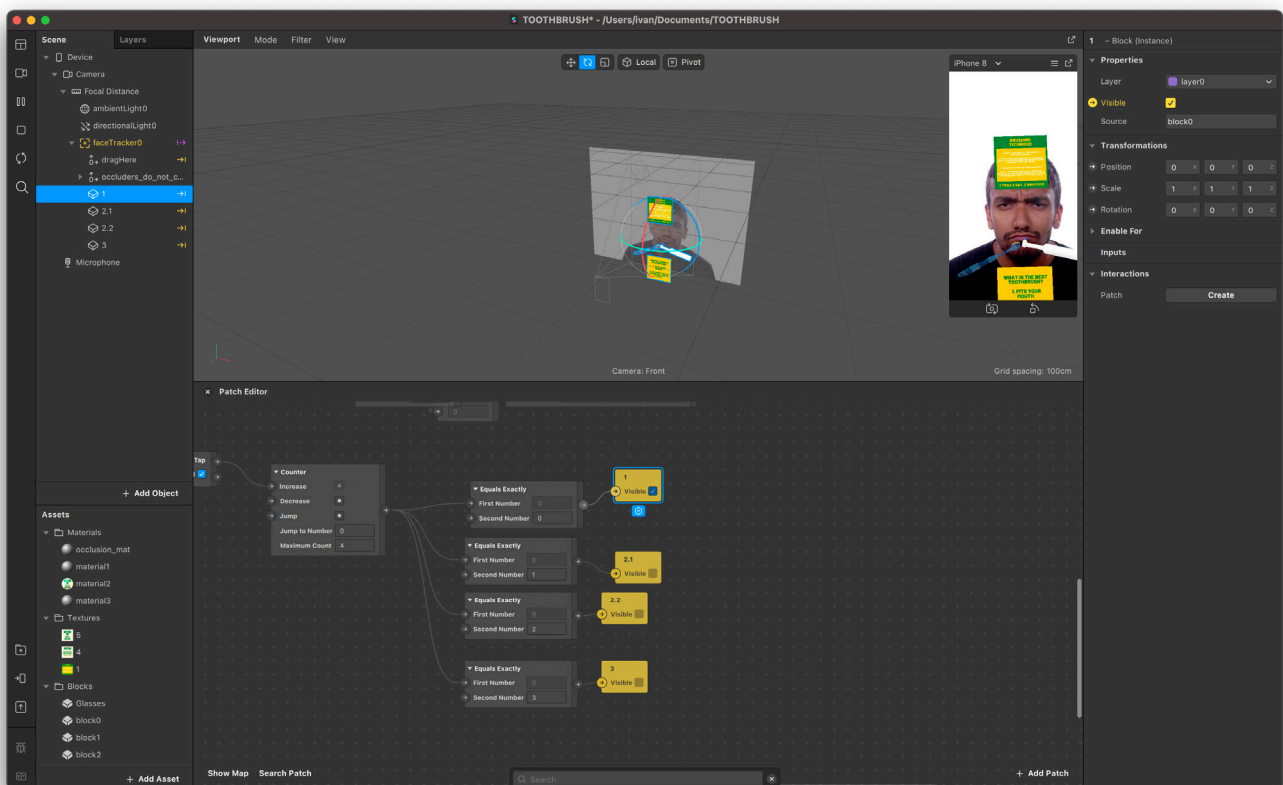

The project aims to reach out to as many people as possible during the pandemic without needing physical contact to share information about dental health. Made using fun colors and visual elements, the target user are all social media users especially kids and teenagers to know about dental health since youth to build a strong foundation of dental health.

I have managed to spread the page to cousins, parents back in Indonesia, and friends studying abroad in other countries. Instagram filters are shown to all engaged followers when shared on public stories, hence it is very easy to reach out for more public impressions and potential dental health enthusiasts. The project also does not involve any physical waste.

PUBLIC RESPONSES

MAKING OF FILTER

ARCHIVAL PURPOSE:

YouTube Link to a compilation video of public responses and the 4 demo video of the Instagram filters. (Instagram needed days or even weeks to aproove a filter, so as of today, 2 filters are still pending.
